

The complete seed. Not safe to lose, not safe to keep.

Wallet / label:

Created on:

Passphrase set? Kept where:

**This sheet alone opens the wallet. Treat it like the funds themselves.**

Once every share is written down and verified, destroying this sheet removes the single point of failure.

**Words of your seed** 24 words, in this order, splits into 33-word shares

**BIP-39**

Check address (first receiving address of the wallet):

Write it down before splitting. It is the only way to tell a correct recovery from a plausible one.

#### About this sheet

|                 |                                                                                                                             |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------|
| What this is    | the BIP-39 mnemonic itself, not a share. It belongs in a wallet.                                                            |
| Passphrase      | if one is set, it is deliberately NOT on this sheet. Note only where it lives.                                              |
| After splitting | verify every share, restore once as a test, then destroy this sheet or store it as securely as all the shares put together. |
