

One part of a split seed. Worthless alone, whole together.

Wallet / label:

Created on:

Share:

_____ of _____

Shares needed:

These are SSKR bytewords, not a wallet phrase. A hardware wallet does not accept them.

Restore them at seedhodler.io or with any Blockchain Commons tool (for example bc-seedtool).

Bytewords of this share 41 bytewords, in this order, from a 24-word seed

Check address (first receiving address of the wallet):

If it does not match after recovery, the result is wrong, even when it looks perfectly valid.

Recovery

How this was made

BIP-39 mnemonic -> entropy -> split into shares (SSKR, bytewords)

To restore

enter enough shares at seedhodler.io and it returns your mnemonic

Without the tool

any SSKR / Blockchain Commons tool returns the raw secret. Those bytes ARE the BIP-39 entropy. Encode them back into a BIP-39 mnemonic.

A single share is useless on its own. If found, please contact:
