Check address (first receiving address of the wallet):

If it does not match after recovery, the result is wrong, even when it looks perfectly valid.

Recovery

How this was made

BIP-39 mnemonic -> entropy -> split into shares (SLIP-0039)

To restore

enter enough shares at seedhodler.io and it returns your mnemonic

Without the tool

any SLIP-0039 library returns raw bytes. Those bytes ARE the BIP-39 entropy. Encode them back into a BIP-39 mnemonic.

A single share is useless on its own. If found, please contact:
