

Verification log

Once a year, and whenever a storage location changes

Checked from the outside: seal intact, envelope at the agreed place, keeper reachable. The envelope stays closed. Once every few years the full test is worth it: bring enough shares together, restore the wallet, compare the check address, then write the words down again and re-seal.

Date	Place / envelope	Seal intact	Contents complete	Test done	Address matched	Re-sealed	Initials

If a check fails

A broken seal or a missing envelope means this share must be treated as compromised. Making a new one at the same place does not help, because the old one stays valid. The right response is to split the seed again, write all shares anew, and destroy the old ones. If theft is suspected, move the funds to a freshly created wallet.
